1. A 500Ah battery at a nominal voltage of 12V has a total energy capacity of 6,000 watt-hours (Wh) or 6 kWh. This capacity indicates how much energy the battery can store and deliver over time when fully charged.

What are amp hours and what does Ah mean in a battery? Amp-hours, or Ah for short, are a unit of measure for a battery's energy capacity. This rating tells us how much current a battery can provide at a specific rate for a certain period. So, for example, if you have a fully-charged 5-Ah battery, it can provide five amps of current for one hour.
