What is ASC 150 storage?

Warranty... 2. About ASC 150 Storage About controller operation The ASC 150 Storage provides effective control for an energy storage system (ESS). You can add the controller to an existing plant, or use it with other DEIF controllers in a power/energy management system.

What is a Deif ASC 150 storage?

It can be used on its own for ESS/hybrid rental or integrated in third-party plant control solutions or a DEIF power management system. The controller optimises the battery power, to save fuel and maximise green penetration. Designed for hybrid power plants, the DEIF ASC 150 Storage enables effective energy storage system (ESS) control.

How does the ASC 150 storage single controller work?

The ASC 150 Storage Single controller can easily be integrated in single-ESS rental assets, providing emission-free power rental solutions. It ensures full communication with the ESS through its ability to communicate with a BCU (battery control unit) or directly with a BMS (battery management system) and PCS (power control system) over Modbus.

How does ASC 150 genset work?

This means that the system uses as much battery power as possible before starting a genset. If the genset is in operation, the ASC 150 Storage controller tries to decrease the genset load to minimum (P DG minimum). Power source operation: The ESS can be a power source if the SOC is above threshold 1.
