

Will Hilti save CO2?

The transition of the energy supply at all Hilti sites worldwide to electricity from renewable sources was already completed at the end of 2020. This will lead to CO2 savings of more than 20 percent, or 40,000 metric tons, per year.

What is the Hilti sustainability program?

The program is based on a holistic understanding of sustainability that incorporates the strategic action fields of "environment," "people" and "society." Organizationally, the strategy is anchored by the Hilti Group's Executive Board.

Why is Hilti certified?

At the end of its useful life, a building and its many components serve as important and valuable sources of raw materials. As part of our effort to ensure transparency, more and more of our products are certified in terms of environmental and health aspects by external agencies. At Hilti we lift our sustainability efforts to a new level.

What makes Hilti a successful company?

"We are convinced that long-term success is only secured through business decisions that value environmental, people and social aspects equally with economic factors," said Christoph Loos, CEO of the Hilti Group. "We are aware that this is a journey with several stations still ahead of us."

Does Hilti Group have a sustainability report?

The company's new sustainability report provides transparency on the targets established and progress made. In view of the increasing challenges posed by climate change, and to meet its social responsibilities, the Hilti Group has set clear sustainability targets and launched a number of global and local initiatives.

Why is Hilti re-engineering?

From anchors to firestop, Hilti is actively re-engineering and reformulating most building components according to green certification criteria. We are removing hazardous substances, minimizing emissions, increasing recycled content and, as always, striving to source raw materials responsibly.

Active in onshore oil and gas? Partner with us for design and technical support from over 100 dedicated specialists. Or access products such as modular strut systems for corrosive environments that eliminate the need for hot work. In the mining industry, engineering, procurement and construction (EPC) sub-contracting is the norm. However, our offering can ...

Construction projects in the energy and industry sectors face increasing time, cost and environmental pressures. ... Hilti is your partner in helping to mitigate some of these challenges resulting in reduced cost of

project execution and overall ...

Respaldadas por la garantía Hilti, estas soluciones están diseñadas para reducir retrasos causados por herramientas o productos averiados y de esa manera acelerar la entrega de las obras. Soluciones para subestaciones Soluciones para transmisión y distribución (T & D) Soluciones para centrales térmicas Soluciones para centrales nucleares ...

See how partnering with Hilti can help bring innovative technologies, services and solutions, such as customized logistics and engineering design to energy ... Our offering for the energy industry ranges from systems for simpler installation and removal of checker plate in power plants to specialist cordless cable cutters and crimpers for ...
