

### What are the different types of energy sources in Zambia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Zambia: How much of the country's energy comes from nuclear power?

## How has climatic change affected Zambia's Electricity Supply?

Because the greater part of Zambia's installed generation capacity is from hydropower, climatic changes have left the country vulnerable to energy insecurity. Droughts and low rainfall have a devastating effect on the country's electricity supply and have triggered some of the worst electricity crises that the country has seen.

How many power companies are there in Zambia?

There are three power producing and distribution companies in Zambia; (a) Zambia Electricity Supply Corporation Limited (ZESCO), a government-owned company (b) Lunsemfwa Hydro Power Limited and (c) Ndola Energy. ZESCO, the largest of the three owns and maintains 94.7 percent (2306/2434) of installed hydropower capacity, as of 2016.

What percentage of Zambia's Electricity is solar?

Less than 1% of Zambia's electricity is produced from non-hydro renewable energy sources. With approximately 3000 annual sunshine hours and an average irradiation of 5.5 kWh/m<sup>2</sup>/day, Zambia is a prime site for solar power plants and solar mini-grid development (United Nations Development Programme,; Zambia Ministry of Energy,; ZESCO,).

## Does Zambia need more energy?

While developed nations look to decarbonize, countries in sub-Saharan Africa, including Zambia, will need significantly more energy to power a high-growth society and achieve development goals. The vast majority of Zambia's population is comprised of smallholder farmers, producing 80 percent of the country's agricultural production.

## What is Zambia's Electricity Supply Industry like?

The electricity supply industry in Zambia has been dominated by the development of state-owned utility-scale power generation infrastructure by ZESCO. Private sector participation in Zambia's electricity supply industry has been few and far between, only emerging in 2001.

Biomass-derived 5-ethoxymethylfurfural (EMF) with excellent energy density and satisfactory combustion performance holds great promise to meet the growing demands for transportation fuels and fuel additives to a certain extent. In this review, we summarized the relative merits of the EMF preparation from different feedstocks, such as platform chemicals, ...

Zambia is potentially self-sufficient in sources of electricity, coal, biomass and renewable energy. The only energy source where the country is not self-sufficient is petroleum energy. Many of the sources of energy where the country is self-sufficient are largely unexploited. As of 2017, the country's electricity generating capacity stood at 1,901 megawatts.
