

The integration of the BMS and solar inverter ensures efficient energy utilization and prolongs the lifespan of the battery system. Advantages of Redway 48V lithium-ion battery Redway's Lithium-Ion batteries offer features with protective features, of which our 48V Lithium-Ion batteries are particularly notable.

The main distinctive feature is the number of cells that can be supervised, which defines also the maximum voltage of the BMS. In addition to that, the maximum current is important, which defines the maximum power together with the system voltage. The different Libre Solar BMS types are named according to the following schema:

How does it work? In short, a BMS analyses real-time measurements from the chemical battery, then adjusts charging/discharging parameters and communicates this information to end-users. These sensors can monitor battery voltage, state of charge (SOC), state of health (SOH), temperature and other critical measurements. They can even display ...
