

Bouvet Island is known as the most remote island in the world; Antarctica, over 1600 kilometers (994 miles) to the south, is the nearest land mass. Located near the junction between the South American, African, and Antarctic tectonic plates, the island is mostly formed from a shield volcano--a broad, gently sloping cone formed by thin, fluid lavas& #8212;that is almost entirely ...

Bouvetøya (Bouvet Island) and its territorial waters were protected in 1971, making it the world's most remote nature reserve. All activity on the island is strictly regulated. The Norwegian Polar Institute processes applications in accordance with the ...

Descubrimiento y primeros avistamientos. Fue avistada por primera vez el 1 de enero de 1739 por una expedión a bordo del Aigle, cuyo capitán era el francés Jean Baptiste Charles Bouvet de Lozier (1705-86). Sin embargo, la posición de la isla no fue calculada correctamente, colocada ocho grados hacia el este, además de que Bouvet no circunnavegó su hallazgo, por lo que no ...

Bouvet Island was discovered in 1739 by the French navigator Jean-Baptiste-Charles Bouvet de Lozier (1705-86), for whom it is named. It was rediscovered by a German expedition in 1898, and Norwegian expeditions to the Antarctic in the 1920s claimed it for Norway as a potential whaling station. The Norwegian flag was first hoisted over the island in December 1927; it was ...

Calculations of sunrise and sunset in Bouvet Island - Bouvet - Norway for February 2024. Generic astronomy calculator to calculate times for sunrise, sunset, moonrise, moonset for many cities, with daylight saving time and time zones taken in account.

Site description (2001 baseline) Bouvetøya rises to 780 m a.s.l. (Olavtoppen) and is bounded by steep slopes on the northern, western and south-western sides, with narrow beaches. Permanent ice covers 93% of the island, leaving only a few ice-free areas along the coast. The largest such area is Nyrøysa, which was formed between 1955 and 1958, probably by a large landslide.
