

What is Mongolia's power supply?

Breakdown of Mongolia's power supply in 2014 (kWh) The Western Energy System has only one generating source, i.e. the 12 MW Durgun Hydro Power Plant, which was put into operation in 2008.

Does Mongolia have a renewable power system?

The Mongolian power system is in great transition with the increased use of renewable-based systems to replace coal-fired power plants, moving both domestically and regionally (albeit at a more gradual pace) to maximise the utilisation of its vast amount of renewable energy sources, particularly in the Gobi Desert region.

What type of energy is used in Mongolia?

In Mongolia, total primary energy supplies continue to be dominated by coal, and electricity generation is largely provided by coal-fired power plants, particularly combined heat and power plants. In 2018, 93% of all electricity was produced by thermal power plants, and 98% of all district heat was provided by coal-fired systems.

What is Mongolia's central energy system?

The Central Energy System grid has been dominated by coal-fired power plants. With Mongolia's first wind farm in operation for nearly two years, the grid operators have gained some experience in dealing with variable renewable sources and have also encountered some challenges.

What is the largest coal-fired electric plant in Mongolia?

Built in the 1980s, CHP#4 is the largest coal-fired thermal electric plant in Mongolia, with a design capacity of 580 MW. It supplies about 70% of the electricity and more than 60% of the heat for the city (Yokogawa Electric Corporation 2014).

What is Mongolia's energy demand?

Currently, Mongolia's energy demand is driven largely by rapid development of the country's mining sector, especially in the South Gobi region as a result of mining activities including gold, copper and coal mines. There is a critical need to modernize the country's ageing energy infrastructure and to expand its power and heat distribution systems.
