Are Enphase IQ8 microinverters a good choice?

"Enphase's IQ8 Microinverters are best in class due to their advanced technology that ensures the highest energy output and efficiency, maximizing the performance of each solar panel," said Boris von Bormann, co-founder of Renu Energy TCI, an installer of Enphase products in the Turks and Caicos Islands.

What types of microinverters does Enphase Energy offer?

Enphase Energy has two families of microinverters: the older seventh-generation IQ7 series and the new eighth-generation IQ8 series. IQ8 micros are available in an extensive range of sizes to suit specific panel sizes and voltages, in particular, the more powerful commercial solar panels rated up to 600W.

Who makes a microinverter & how does it work?

For those new to solar, learn the basics of how solar works here. Enphase Energy, founded in 2006, has long been regarded as the world leading microinverter manufacturer. Based in the US, Enphase launched the first microinverter, the M175 in 2008, but it wasn't until the next-gen M190 was launched in 2009 that sales really took off.

When was the first microinverter made?

Based in the US, Enphase launched the first microinverter, the M175 in 2008, but it wasn't until the next-gen M190 was launched in 2009 that sales really took off. Ever since Enphase has established itself as an industry leader in microinverter technology and has a huge market share in North America.

How long does a microinverter last?

Many microinverters, such as those from Enphase, come with a 25-year warranty (10 years outside North America), which is far longer than the standard 10 years for most string inverters. Again, bear in mind that this is only relevant with high-quality microinverters such as those from Enphase.

Why did Enphase micro inverter shut down in Australia?

Because of the advanced monitoring of their inverters, they were able to announce that "No Enphase Micro inverter across Australia shut down due to high temperature" during this period. Other manufacturers also have very stringent testing of their inverters and have performed well in hot and freezing temperatures.
