The first exoplanets, i.e. planets outside our own solar system, were discovered only a few decades ago. Today
we know of thousands of them, and they pose a challenge to the understanding of how planetary systems form.
Our group participate in discovering and characterising some of the most interesting exoplanets.

Our research and instrument development related to observational cosmology covers a broad range of topics.
From the cosmic microwave background and large-scale structure, to the epoch of reionization and the
formation and ...
