

Does Costa Rica have an electricity grid?

Only a few countries have developed an electricity grid powered mostly by renewable sources. Surprisingly, Costa Rica is one of them. For years, Costa Rica has relied on clean energy for up to 99% of its electricity, putting it in the league of innovative countries like Iceland, Norway and New Zealand.

Does Costa Rica have a Green Energy Miracle?

Costa Rica's green energy miracle is at a critical juncture. According to the National Electricity Control Center, Costa Rica's renewable energy generation decreased from 99% in 2021 to 98% in 2022. It is estimated to be between 92% and 95% in 2023.

How will renewables affect Costa Rica's energy system?

Both renewable scenarios will result in a high proportion of variable power generation (PV and wind): 33%-31% by 2030 and 54%-66% by 2050. Such a varied mix of renewables will make Costa Rica's energy system more resilient, efficient and affordable.

Who is responsible for electric mobility in Costa Rica?

Electric mobility is the responsibility of SEPSE (Secretaría de Planificación del Subsector Energético). For some laws and regulations, however, the Ministry of Public Transport and the Ministry of Environment and Energy share some of these responsibilities. Around 40% of Costa Rica's emissions come from the transport sector (Rodríguez, 2019b).

Can Costa Rica achieve a fully decarbonised energy system?

This policy roadmap complements the study "100% Renewable Energy for Costa Rica - A decarbonisation roadmap" by the University of Technology Sydney - Institute for Sustainable Futures. It aims to provide policy pathways for Costa Rica to achieve a fully decarbonised energy system in Costa Rica.

Does Costa Rica have 100% renewable electricity?

To date, Costa Rica is one of very few countries to run on 100% renewable electricity for the largest part of the year. In fact, 2018 was the fourth year in a row that Costa Rica generated more than 98% of its electricity from renewable sources (2015: 98.99%; 2016: 98.21%; 2017: 99.67%; 2018: 98.15%).

That means Costa Rica will have run on more than 98% clean energy over seven consecutive years, according to data from the National Center for Energy Control (CENCE). "Once again, Costa Rica is positioned as an example before the world, using clean energy as the basis of the national electricity matrix," said President Carlos Alvarado.

Costa Rica's renewable energy success could be under threat. Central American nation generates nearly all its

electricity from renewable sources but climate change is bringing huge challenges
