

What happened to Cuba's energy grid?

People gather in a plaza as Cuba is hit by an island-wide blackout, in Havana, Cuba, October 18, 2024. Cuba's energy grid has collapsed, leaving millions without power, the latest in a series of failures on an island struggling from creaking infrastructure, natural disasters and economic turmoil.

Does Cuba have an energy crisis?

Cuba has increasingly been falling into an energy crisis, which has plunged its citizens into darkness with uncertainty over the future of the country's energy security. The most recent crisis commenced on the 17th of October when non-essential workers were ordered to go home to help reduce the demand for power.

What happened to Cuba's largest power plant?

The collapse of Cuba's largest power plant, Antonio Guiteras in the northwestern province of Matanzas, is behind the latest blackout. Set up in 1988, it had been undergoing extensive maintenance for days after operating all summer.

What happened to Cuba's energy system in October?

For nearly a week in October, most of Cuba suffered near-total blackouts, the worst energy outages in decades. Cuba's energy and mines ministry said "conditions are more favorable now than in the last disconnection" and that the system was gradually being restored.

How will Cuba's relationship with other countries impact the energy transition?

Cuba's relationships with other countries will be key to realizing the energy transition. Since 2000, Venezuela has been Cuba's primary source of imported oil. However, political and economic troubles in Venezuela caused oil exports to Cuba to fall by about half, resulting in Cuba increasingly seeking oil imports from Mexico and Russia.

Will new energy regulations improve long-term energy security for Cuba?

While the new regulations could help improve long-term energy security for Cuba, the government is doing little to alleviate the immediate effects of the energy crisis.

The energy crisis in Cuba is deepening, with electricity shortages severely impacting daily life. The island is grappling with a power generation shortfall that reached 1,595 MW during peak hours. In a recent statement, the Cuban Electric Union (UNE) revealed that the day started with a generation capacity of just 1,550 MW compared to a demand of 2,480 MW.

As shown by the devastation to Cuba's energy grid caused by Hurricane Ian in 2022, increases in extreme weather events can reduce the supply of fossil fuels, damage generation and grid infrastructure, reduce output, and affect the security of supply. Transitioning to a cleaner and more climate-resilient system is essential if
