

What percentage of Denmark's energy supply is oil?

In 2022, oil represented 37% of Denmark's Total Energy Supply (TES), in line with the International Energy Agency (IEA) average of 35%. Its stable share over the past decade saw a slight decrease in Total Final Energy Consumption (TFEC) from 45% in 2011 to 38% in 2021, primarily due to shifts in the transport sector.

Does the Danish Energy Agency publish monthly energy production and consumption statistics?

Danish Energy Agency has published monthly energy production and consumption statistics, which are available online in excel format. (Latest version: September 2024. Next version for October 2024 will be available December 12 th 2024). Since January 2005, the Danish Energy Agency has published a monthly oil supply statistics.

What is the Danish energy model?

The Danish Energy Model is a holistic system that includes all energy sectors. At the Danish Energy Agency, we are making a difference every day - in Denmark and in countries all over the world. We view climate change as the biggest challenge we are facing. We know we need to be ambitious and innovative in our approach to climate change mitigation.

How is energy used in Denmark?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How many homes are heated by oil in Denmark?

Official statistics estimate 231,000 residences heated by oil in 2014 (down from 328,000 in 2013), but only 87,000 actually purchased oil during 2014. In 2022, oil represented 37% of Denmark's Total Energy Supply (TES), in line with the International Energy Agency (IEA) average of 35%.

Denmark: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

In 1972, 92% of Denmark's energy consumption came from imported oil. [19] The 1973 oil crisis forced Denmark to rethink its energy policy; in 1978 coal contributed 18%, and the Tvind wind turbine was built, along with the creation of a wind turbine industry. [20] The 1979 energy crisis pushed further change, and in 1984 the North Sea natural gas projects began. [21]
