

How is energy used in Czechia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Is coal still a key energy source in the Czech Republic?

As the country's only domestic fossil fuel, coal has been and still is a key energy source in the Czech Republic. In 2019, it accounted for one-third of total energy supply, 46% of electricity generation and over 25% of residential heating.

How much energy does the Czech Republic emit per capita?

The EU average was 7.9 tons per capita. Czech Republic's emissions were comparable to those of Japan or the Netherlands. In 2023, the city of Brno is working to modernise its heat generation and distribution infrastructure.

Does the Czech Republic have a good transmission grid?

The Czech Republic's transmission grid is well connected with its neighbouring countries, with an interconnection capacity of 30%, with more interconnections in the pipeline. This high interconnection capacity will help the country ensure security of supply in the period to 2030, as the outlook on generation adequacy is uncertain.
