In the project "hybrid urban energy storage", different distributed energy systems in buildings (e.g. heat pumps or combined heat and power systems (CHPs)), central and decentral energy storage systems are coordinated to create a Virtual Energy Storage System (VESS).

Is aggregated demand response a viable alternative to a virtual energy storage system?

The large-scale deployment of ESS is still not feasible in a short term. Aggregated Demand Response (DR) can resemble a Virtual Energy Storage System (VESS) because DR can provide functions similar to charging/discharging an ESS by intelligently managing the power and energy consumption of loads.

Does a virtual energy storage system make a profit?

Summary of virtual energy storage system (VESS) research. Most contemporary studies have only focused on profits by the economies of scale using a VESS. However, the usage of a VESS does not always generate benefits for community participants [26]. Therefore, it is necessary to increase the additional gain when using VESSs.
