Why is solar power growing in Germany?

In 2004, Germany was the first country, together with Japan, to reach 1 GW of cumulative installed PV capacity. Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy Sources Act, and declining PV costs.

How much solar power does Germany have?

At the end of 2023, the country boasted a capacity of about 61 gigawatts (GW), according to figures by solar PV industry group BSW Solar. In contrast to conventional energy systems focused on big and centralized producers, tens of thousands of small solar panel operators have become an important part of the German energy system.

What happened to solar power in Germany?

Since the technology's large-scale launch through the Renewable Energy Act in the year 2000, German companies quickly ascended to global leadership in solar power technology before a collapse after 2012 forced many of them to drop out of business - and continue to struggle with cheaper competitors more than 10 years later.

Will Germany use more solar energy in 2022?

Solar photovoltaics are on the list of renewable energy sources Germany would like to transition to using more. In fact, in the European Union, Germany already produced the most electricity from solar PV plants in 2022, at around 60.8 terawatt hours. This was more than double the amount produced by Spain in second place and Italy in third place.
