

What is energy in Hong Kong?

Energy in Hong Kong refers to the type of energy and its related infrastructure used in Hong Kong. Energy is crucial for the development of trade and industries in Hong Kong with its relatively small usable land. Hong Kong mostly imports its energy from outside or produces it through some intermediate process.

Is BEC promoted in residential units in Hong Kong?

However as the energy consumption in residential units are from appliances such as room air conditioners, computers, refrigerators, compact fluorescent lamps etc., which are covered by EMSD's initiative The Hong Kong Voluntary Energy Efficiency Labelling Scheme, the promotion of BEC in these tenant units has not been included in this study.

How to improve energy performance in existing buildings in Hong Kong?

In Hong Kong, improvement to energy performance in existing buildings can be referenced to BEC compliance and through an approach acceptable by the various stakeholders, which is to be further explored, consulted and determined. Table 3.1 shows examples of the energy efficiency strategies for new and existing buildings.

Why is energy important in Hong Kong?

Energy is crucial for the development of trade and industries in Hong Kong with its relatively small usable land. Hong Kong mostly imports its energy from outside or produces it through some intermediate process. Hong Kong meets all of its coal demand through imports.

What are the benefits of building energy labels in Hong Kong?

In Hong Kong, since the private and public housings are the main investments of the citizens, some forms of building energy labels will be useful to give prospective owners or tenants better information on the energy costs and performance of the building or apartment. The labels can also include recommendations for improving energy performance.

Why do we need to regulate energy use in Hong Kong?

It is because they are the most significant sector of energy end-use and will continue to grow due to the service-oriented economy in Hong Kong. If other types of buildings or parts of them have energy characteristics similar to commercial buildings, then it is possible to apply a similar regulatory control method at this stage.

First hourly renewable energy certificates linked to a local identifiable renewable project.
