Clearance - the line-of-sight distance between two conductors through the air.. Charge Voltage - voltage that the battery is charged to when charged to full capacity.. Contactor - a switch that can be operated by the control system. They are essentially a relay. Creepage - the distance between two conductors on the surfaces of the parts or along the surface of the insulating material.

The value of  $R_{pre}$  depends on the system's requirements for the precharge time (As the part of overall HV activation time). The selection process for  $R_{pre}$  is explained below:. When a resistor is connected in series with a capacitor, it forms a simple RC circuit. The time constant ( $T$ ) of this circuit is calculated as  $R \cdot C$ .

Die Entwicklung von HV-Systemen für Elektro- und Hybridfahrzeuge erfordert strenge Tests, um Sicherheit und Zuverlässigkeit zu gewährleisten.
