

Madagascar alternative energy company

How much electricity does Madagascar have?

In Madagascar, only 15% of the population has access to electricity. In 2017, the country had just 570 MW of mainly thermal (60%) and hydroelectric (40%) installed production capacity. Furthermore, only 60% of this energy is truly available owing to poor maintenance of power plants.

Is Madagascar ready for solar power?

With all regions of Madagascar enjoying over 2,800 hours of sunlight per year, the Grande Ile is the perfect location for development of solar power, with a potential capacity of 2,000 kWh/m²/year. The Government is counting on this potential to fulfill its objective of providing energy access to 70% of Malagasy households by 2030.

Does Madagascar have a business climate?

In the World Bank Group's Doing Business 2018 report that assesses the business climate, Madagascar ranks 184 out of 190 countries for access to electricity. Keenly aware of this challenge, in 2014, the Government of Madagascar decided to embark on intensive reforms to transform the sector.

About us. Spécialisé dans la distribution de matériel de production et d'économie d'énergie sur Madagascar, nous proposons également des études de faisabilité, de production et de dimensionnement, ainsi que l'installation, la maintenance et le dépannage.

QIT Madagascar Minerals is a mining company and a subsidiary of Rio Tinto, a global mining group. The company operates a mineral sands project in southeastern Madagascar, where it produces ilmenite, zircon, and rutile. ... Biogasikara Energy is a private company in the renewable energy sector in Madagascar. We produce biomass briquettes and charcoal from agricultural waste to replace firewood and traditional charcoal in industrial, commercial, and private use to fight deforestation, create local jobs, and reduce pollution.

Access to energy is a cornerstone of the GOM's efforts to lift Madagascar out of poverty. The objective is to double energy production within five years, increase access to electricity for at least 70 percent of the population by 2030, improve reliability of supply, and reduce energy prices.

According to the energy inventory drawn up by the MEM 4 [14] and the study report of the CREAM 5 [15], wood energy has the highest share (92%) in the total energy supply in Madagascar, followed by fossil fuel (7%). Only less than 1% of this demand is supplied by other renewable energy sources. This high share of wood energy is explained by its accessibility ...

Madagascar has a large range of renewable resources that can improve its energy situation, such as geothermal energy, solar energy, wind energy and micro hydro. Three (mini)hydro projects are being developed by private company Hydelec SA: Sahanivotry 16.5 MW (1MW = 106 watts), Maroantsetra 1.2 MW and Mahitsy 12 MW ("chute de Farahantsana ...
