

What is Mongolia's power supply?

Breakdown of Mongolia's power supply in 2014 (kWh) The Western Energy System has only one generating source, i.e. the 12 MW Durgun Hydro Power Plant, which was put into operation in 2008.

Will Mongolia become an energy exporting country in the future?

The goal of these policies is that Mongolia will become an energy exporting country in the future by utilizing its rich renewable energy resources with efficient and environmentally-friendly technologies while establishing mutually beneficial cooperation with neighboring and regional countries. 8. Conclusions

What is Mongolia's energy potential?

According to findings by the National Renewable Energy Center (NREC) using data from the US National Renewable Energy Laboratory (NREL), Mongolia's wind energy potential amounts to at least 1.1 terawatts (TW), while solar potential is about 1.5 TW (Stackhouse and Whitlock, 2009).

Is Mongolia importing electricity from China?

Electricity to supply Mongolia's southern border towns and the Oyu Tolgoi mine is also imported from China at prices of around USD 110 per MWh.<sup>11</sup> In recent years proposals have been made to export coal-fired power to China.

Why is Mongolia so dependent on electricity imports?

Also, in order to meet the electricity demand of the Oyu Tolgoi copper mine in the south, electricity is imported from China. As a result, Mongolia has been heavily dependent on electricity imports in recent years.

Is Mongolia a good place to develop wind power?

Small hydropower schemes are also in operation throughout the country. In 2013, the first 52 megawatt (MW) wind farm commenced operation, demonstrating that the mountain ridges in Mongolia can yield utility-scale wind power. There is further potential to develop large hydropower schemes, and enormous potential for solar and wind power development.
