I'm not versed enough to provide that much advice on that, lol. I have done a fair amount of reading on batteries since becoming a tesla car owner (sort of comes with the territory I guess) and one thing I feel comfortable saying is that it's "better" for the battery to have more frequent, shallower charge /discharge cycles than to have larger 0-100 charge / discharge cycles.

Hi all, my first post. I'm interested in researching using the Model 3 battery pack as a powerwall for home storage/supply of solar power. The Model 3 battery pack varied from the Models S and X batteries in that their battery packs could easily be broken down into 24v modules and so 2 in series would give the 48v that is standard within the solar industry.

However, it might be possible to use the ESS in other applications. For example, the ESS could be used as a power source for off-grid backup or load leveling. The battery requirements for such an application are not as demanding as a high performance vehicle battery.
