

PXiSE (pronounced "pice"), a member of the Yokogawa Group, develops next-generation grid control technology. PXiSE software solutions unlock the potential of distributed generation to improve grid reliability and increase renewable energy output, while helping ensure system balance and power quality.

PXiSE (pronounced "pice"), a member of the Yokogawa Group, develops next-generation grid control technology. PXiSE software solutions unlock the potential of distributed generation to ...

In a previous study, Raytheon found that short duration Li-ion energy storage can be used in Department of Defense (DOD) microgrid installations to improve reliability and significantly reduce costs compared to all-diesel microgrids.. The project profiled in this case study builds on the previous one and demonstrates that a PXiSE Microgrid Controller, when coupled with a ...

PXiSE (pronounced "pice"), a member of the Yokogawa Group, develops next-generation grid control technology. PXiSE software solutions unlock the potential of distributed generation to improve grid reliability and increase renewable ...

The DER Management and Communication Platform helps utilities register, monitor, organize, and schedule the dispatch of customer distributed energy resources (DERs) including energy storage and solar PV via a cloud-native server running the IEEE 2030.5 standard protocol. Gain visibility and management of thousands of customer DERs.

PXiSE Energy Solutions enthusiastically announces that effective January 1, 2023, Tim Allen has assumed leadership as President and CEO. Tim brings more than 22 years of experience across utility-scale solar, wind and energy storage projects, software controls, investor-owned utility, independent power producer and pure developer realms.

Sempra Energy's headquarters in downtown San Diego, California, is home to nearly 400,000 square feet of building space. The 16-story, LEED Gold-certified building includes numerous office and conference spaces, a gym, a caf&#233;, and ...

The PXiSE DERMS helps utilities control the increase in renewable energy assets, batteries and electric vehicles. It coordinates both front-of-the-meter (FTM) and behind-the-meter (BTM) distributed energy resources (DERs) alongside traditional grid components on a single network through an integrated software platform that controls the dynamic two-way flow of energy.
