

What is Romania's solar PV target?

21-2030 Update - First draft version For solar PV, Romania's 2030 target is 8.3 GW, of which 2.5 GW in rooftop installation and 5.8 GW in utility-scale projects. Although an improvement on the previous iteration of the NECP, which projected a total of 5.1 GW, the rooftop target is not

How much investment does Romania need to achieve the energy strategy?

Investment needs to achieve the objectives of the Romanian Energy Strategy are estimated as EUR 127 billion overall from 2021 to 2030 (annually around 6% of current GDP), mostly in energy demand sectors. The use of Union level funding sources such as cohesion policy or the Modernisation Fund is not yet specified.

Does Romania need a strong renewables supply chain?

The EU, including Romania, needs to develop a strong renewables supply chain in order to avoid having to rely in imports from third countries. Recognizing the status of wind energy as a sector of strategic importance is key.

Will Romania achieve a decarbonised energy sector by 2040?

In contrast, the investments outlined in Romania's National Energy and Climate Plan (NECP) do not ensure a decarbonised energy sector by 2040. The Romanian power sector would emit 9.2 MtCO₂ in 2030 (which can be halved in a lower-gas scenario) and 3.5 MtCO₂ in 2040, at slightly higher wholesale electricity prices.

Is Romania a net exporter of energy?

From being a net energy exporter a few years ago, Romania has entered a constant deficit. During 2018, Romania was a net exporter of energy, the level of exports (5.5 TWh or 9.8% of the domestic consumption) being almost double to the level of imports (2.9 TWh or 5.3% out of the domestic consumption).

How much money does Romania get from the EU modernization fund?

In 2022, Romania received 1.4 billion Euro from the EU Modernization Fund for transition towards clean energy. The amount will cover construction of new eight solar parks and two electric power plants with gas turbines in combined cycle, to replace lignite with renewable sources and gas.

Romania's Energy Storage: Assessment of Potential and Regulatory Framework transition reduced. For example, the smart charging of electric vehicles and vehicle-to-grid (V2G) solutions could provide flexibility for the power sector, assist in congestion management, and limit costly investments in additional grid capacity.

The renewable target for 2050 is set at 56%. The country slightly exceeded its 2020 target on renewables with a share of renewables in final energy consumption of 24.5% (+0.5 point). In 2022, renewables covered 24.1% of final energy consumption, including 43.7% for electricity, 26.3% for heating, and 8.2% in transport.

The latest form of the energy strategy, published by Ministerul Energiei, sets a target for the use of biomethane, a "green" gas, in gas networks for the year 2030. "The Energy Strategy aims to achieve a 5% share of biomethane in the natural gas network by 2030 and 10% by 2050. This initiative will further
