Rotational Energy Levels. Figure (PageIndex{2}): predicts the rotational spectra of a diatomic molecule to have several peaks spaced by  $(2 \tilde{B})$ . This contrasts vibrational spectra which have only one fundamental peak for each vibrational mode. From the rotational spectrum of a diatomic molecule the bond length can be determined.

We think the flywheel has about 110kWh of rotational energy storage. Likewise, in the US, Beacon Power has pioneered the use of flywheels for frequency regulation, with 20 MW plants located in Stephentown, New York and Hazel Township, Pennsylvania. The company is paid by the grid for providing frequency regulation as a service.

In the latent heat thermal energy storage (LHTES) system, use of phase change materials (PCMs) provide a large amount of capacity to store thermal energy attributed to the PCM latent heat of fusion. Also, there is a small temperature variation in the charge and discharge process compared to sensible heat thermal energy storage [2].

In the case internal forces (e.g., due to flexibility) dissipate the system's energy, the rotational energy will decrease to its minimum value of  $h^2 / I_{\text{Max}}$ , resulting in a stable rotation about a major principal axis with moment of inertia  $I_{\text{Max}}$ . Thus, for practical applications, only the principal axis with maximum moment of inertia shall be ...

Flywheel energy storage (FES) can have energy fed in the rotational mass of a flywheel, store it as kinetic energy, and release out upon demand. It is a significant and attractive manner for energy futures "sustainable". The key factors of FES technology, such as flywheel material, geometry, length and its support system were described ...

FESS has a unique advantage over other energy storage technologies: It can provide a second function while serving as an energy storage device. Earlier works use flywheels as satellite attitude-control devices. A review of flywheel attitude control and energy storage for aerospace is given in [159].

The Barbados government had modelled a need for 204MW of energy storage by 2030 to support its renewable energy goal, with 144MW by 2025. Moves are already being made to increase storage capacity: the government ordered BLPC to initiate a 50MW energy storage pilot programme and established an energy storage pilot tariff framework last year.

In recent years, the rapid development of renewable energy technologies, including wind, marine, and solar, and their volatile nature motivated scientists to think about energy storage technologies. 8, 9, 10 One such technology utilizes rotational motion and is based on storing kinetic energy in flywheel energy storage systems, which can store ...

The flywheel storage technology is best suited for applications where the discharge times are between 10 s to two minutes.
