

Our solutions for Grids of the Future help utilities digitize, optimize, and automate grid processes for a more sustainable future. We offer the industry's broadest, end-to-end software and services for managing the entire lifecycle of the grid, providing foundational, stepwise, cybersecure digital transformation and grid data management.

Globema delivers specialized software solutions that support the construction and maintenance of smart grids, featuring optimal distribution network infrastructure management, advanced technical calculations (based on static and dynamic data, also from AMI), forecasting & planning production of energy from RES, control and regulation of voltage levels and reactive ...

the need for new infrastructure, and the implications for grid stability and security of supply are challenges confronting power grid operators [24]. Consequently, a detailed feasibility study for the adoption of SGs is warranted in the selected area of Ma'an city, Jordan. 2. METHODOLOGY

With a primary focus on smart grid software, we provide advanced solutions that enable utilities to digitise, optimise, and automate their grid operations for enhanced flexibility, resiliency, and risk mitigation. As the energy landscape continues to evolve, embracing digital grid software becomes crucial for utilities to stay ahead.

Jordan moves one step closer to smart grid. The studies, 90 percent of which will be funded by the USTDA grant, will also explore the introduction of smart meters to provide up-to-date data on capacity loads for providers and accurate billing information for consumers ... Amman, Jordan, April 27, 2012 -- Jordan moved one step closer to a smart ...

NIST's National Coordinator for Smart Grid Interoperability launched a three-phase plan to jump-start development and promote widespread adoption of smart grid interoperability standards: Engage stakeholders in a participatory public process to identify applicable standards, gaps in currently available standards, and priorities for new ...

The smart grid software dynamically updates energy supply and demand in 5 minute intervals, deciding whether to pull energy from the battery or from the panels and when to store it in the hot water heaters. This pilot program was the first such project in France. [102] [103]

GridOS platform and application suite supports end-to-end grid orchestration and market operations with these four components: o Zero Trust grid security model: Built-in, not bolted-on to help protect resources from inside and outside threats. o Federated grid data fabric: Eliminate enterprise data silos with a common transmission and distribution network model to enable a ...

ware and software components, such as sensors, meters, communication networks, and advanced ... smart grid in Jordan is the potential for improved reliability and efficiency of the power grid. Effi-

A full transition towards smart meters in Jordan is a key pillar to achieve a compatible smart grid system, which is the best-recommended solution to sustain energy security in Jordan. It will also foster and flatten the electricity load curve, which will impact the economy mainly by reducing the cost of power generation.

Unlocking edge intelligence with smart grid technology. At the edge of the grid, energy reaches its final destination in homes, office buildings, factories, stores, and more. Utilidata. Utilidata is working with NVIDIA to develop a smart grid chip that can be embedded in smart meters. The chip can enhance grid resiliency, integrate distributed ...

Built on Utilidata's expertise in real-time grid operations, as well as the NVIDIA® Jetson(TM) edge AI platform and the NVIDIA AI Enterprise software suite, the software-defined smart grid chip will enable smart meters to deliver greater value to utilities and their customers, while also unlocking new opportunities for clean energy companies ...

In this paper, the decentralized smart grid control strategy has been implemented on the current grid located in Jordan at a low voltage level to emulate how the Smart Grid concept would work as near as to reality. The DigSILENT Power Factory software and Python are used in this study to obtain the results.

The new grid software offering enables energy companies to easily and quickly implement smart technology for their grid planning and management. These IT upgrades will be faster and less costly than investments in hardware. Through the modular approach, the parts will fit together and can be tailored to meet the individual needs of grid operators.

Smart grid technology as solution. The Intelligent Grid Platform is a solution to this challenge: a smart grid technology platform that unites all grid data and allows to digitalize and automate all processes related to grid impact study, short- as well as long-term grid planning, and grid monitoring:. Automate all important steps of the grid connection process: Transferring of the ...

The company's smart grid solutions deliver real, quantifiable benefits and have proved pivotal to validating the case for smart grid investment. Itron's grid management solution provides utilities with a unified platform for ...

Schneider Electric ist unangefochtener Marktführer bei Smart-Grid-Software und -Services - einschließlic die Nr. 1 f&#252;r ADMS von Guidehouse im Jahr 2023 und die Nr. 1 f&#252;r das DER-Management durch Guidehouse und IDC im Jahr 2022.

Decarbonizing Jordanian Energy Systems Utilising Smart Solutions based on Energy Storage. Green

Hydrogen and Power-to-X for University Students Capacity-Building for Jordan's Future Workforce. Advanced Teaching and training on Smart grid & Grid Integration of Renewable Energy Systems. Modeling and Simulation Distributed Energy Resources in ...

Grid Software liefert Netzbetreibern entscheidende Funktionen, um die Energiewende zu beschleunigen und eine zukunftsichere Energielandschaft zu gestalten. Entwickelt, um die Energiewende der Netze durch entscheidende Funktionen zu beschleunigen, sodass Netzbetreiber die k&#252;nftige Energielandschaft entschl&#252;sseln und gestalten k&#246;nnen.

This research paper provides an overview of the current state of Jordan's energy sector, an explanation of smart grid technology, and an analysis of the advantages and disadvantages of ...

Tantalus is dedicated to helping utilities modernize their distribution grids by harnessing the power of data across all their devices and systems deployed throughout the entire distribution grid - from the substation to the EV charger located behind the meter.

2 ???&#0183; Smart grid means intelligent network and represents an advanced system of electrical networks and technologies that allows for the monitoring and management of electricity distribution and the connection of production sources and users of the energy ... ACCA software S.p.A. - VAT Reg.Nr. IT01883740647 Contrada Rosole 13 - 83043 BAGNOLI IRPINO ...

Digital Twin Software to Control Part of Jordanian Electrical Networks with Considering the Cyber-Security Aspect (DTSA), [April 2021- April 2023 ... The smart grid lab at GJU is established in 2018 and includes a research team that focuses on smart grid topics to conduct several research topics. ... A Case Study,&quot; 2021 IEEE Jordan ...

The smart grid is a modern energy management system designed to improve the efficiency and sustainability of electricity distribution networks. Unlike traditional power grids, smart grids rely on ...
