

Can solar PV reduce energy poverty in Bolivia?

These efficiency savings can be estimated to about 22%,14%,and 26% for BPS-1,BPS-2,and BPS-3,respectively. Furthermore,large-scale development of solar PV,particularly in off-grid communities,can serve to reduce energy poverty in Bolivia(Sovacool,2012).

How much solar power does Bolivia have?

In the study of Jacobson et al. (2017),Bolivia's all-purpose end load would be covered by 22% wind energy,15% geothermal,3% hydropower,49%solar PV,and 10% CSP. For the whole of South America,L&#246;ffler et al. (2017),find roughly 40% shares of both hydropower and solar PV,with the remaining 10% covered by wind offshore and onshore.

Does Bolivia have a long-term energy plan?

As previously mentioned,the Bolivian government does not provide any long-term energy planning study,however,the UNFCC (2015b) states that RE will compose 81% of electricity generation by 2030. Bolivia's scenario for 2027 according to MHE (2009) states that biomass sources will comprise 8% of total final energy demand.

Should Bolivia use solar energy to generate synthetic fuels?

Using Bolivia's own excellent solar resources to generate synthetic fuels in BPS-1 and BPS-2 would result in energy independence and security. Due to the lack of GHG emission costs in BPS-3 fuel costs remain for the fossil fuels used in the heat and transport sectors. Fig. 23.

Does Bolivia have nuclear power?

Bolivia currently has no plans to install nuclear capacity,however,the agency for nuclear energy (ABEN) signed a contract in 2017 with Russia to begin studying nuclear reactors of small capacity and develop Bolivia's nuclear competencies (ABEN,2018).

Does Bolivia have a lithium resource?

Given that Bolivia's PT region is home to the largest lithium reserve in the world(Sauer et al.,2015),development of cost of Bolivia's own lithium usage as extraction of this resource develops may influence decision makers regarding lithium applications in the Bolivian energy system.
