How much does a 5 kilowatt solar system cost?

The average 5-kilowatt (kW) solar panel system is \$14,210 before considering any financial incentives. However, a typical American household needs a system closer to 10 kW to adequately power their home, which costs \$28,241 in 2024. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

How much do solar panels cost?

If you just need a few panels for a small do-it-yourself solar project, expect to pay around \$200 to \$350 per panel (between \$0.80 and \$1.40 per watt). We suggest using NREL's PVWatts Calculator for estimating your solar installation costs. First, consider your average household energy needs. This tells you how big of a system you need.

How much does a rooftop solar system cost?

Mounting system: This is what holds rooftop solar panels in place. Costs vary depending on the type of solar installation, but it generally costs between 7 and 20 cents per watt. Electrical wiring and hardware: This includes the wiring, switches and circuit breakers required to connect the solar panel system to your home's electrical system.

How much does a solar panel cost in California?

California's average cost per watt is currently \$2.47. The difference comes down to efficiency and materials: Monocrystalline panels are made from pure, single silicon crystals; various silicon fragments melted together are used to make polycrystalline panels. Monocrystalline panels have a solid black appearance.

How Solar Panels Work. Solar panels work by converting sunlight into electricity through photovoltaic cells. These cells are made of semiconductor materials like silicon, which absorb photons from sunlight. When sunlight hits the cells, it knocks electrons loose from their atoms, creating an electric current.
