First, we should know what a Grid-Tie Inverter is. A Grid-Tie Inverter is a device that that can transform DC electricity (ie: Solar Panels, Wind Turbine, Battery Storage) into AC power that can be directly injected into your utility's electricity network (the power grid). As of today, most inverters available in the market are in the high output (1000W ~ 5000W) category.

An On-Off Grid Inverter should incorporate this circuitry. Another consideration is the voltage of the backup battery power storage. High power On and Off Grid Inverters tend to use higher voltage battery assemblies. Using higher voltage batteries menad less current has to be "stopped up" household level voltage - typically 110V to 120 V ...
