

What is Switzerland's energy strategy?

Switzerland's energy relies mainly on hydroelectric, nuclear, and natural gas, as well as imported petroleum for cars since Switzerland produces no fossil fuels. Launched in 2011, the 2050 Energy Strategy aims to shift towards sustainable energy practices, achieving climate neutrality and reducing reliance on fossil fuels.

What type of energy is used in Switzerland?

Most energy consumed in Switzerland is in the form of petroleum and motor fuels (43%), followed by electricity (26%) and gas (15%). Most of this energy is used by private households and transport (each one third), while manufacturing and services each account for just under one fifth.

What is the energy transition in Switzerland?

The energy transition is currently being implemented in Switzerland through the Energy Strategy 2050, with the goal of climate neutrality. Only 4 of Switzerland's 5 nuclear power plants have been in operation since 2020 and renewable energies' share of total final energy consumption rose to around 28% in 2021.

What is Switzerland's wind power potential?

Switzerland's wind power potential is several TWh per year. The 2050 Energy Strategy aims to increase production from wind energy to 4.3 TWh a year, this would generate around 7% of the country's electricity.

Why is hydroelectric power important in Switzerland?

The high proportion of energy generated through hydroelectric power and the lack of natural resources (such as coal and oil) help to explain why such a situation is strategically beneficial in Switzerland. In 2017, Swiss voters accepted the revised Energy Act, endorsing the implementation of the 2050 Energy Strategy, which principally aims to:

Why is electricity consumption declining in Switzerland?

Since 2015, electricity consumption in Switzerland has been on a downwards trend. The energy transition is currently being implemented in Switzerland through the Energy Strategy 2050, with the goal of climate neutrality.

Clarion Energy, Synergy BV, part of Clarion Events Group PO Box 1021, 3600 BA Maarssen, The Netherlands Main switchboard: +31 346 590 901 Smart Energy International is the leading authority on the smart meter, smart grid and smart energy markets, providing up-to-the-minute global news, incisive comment and professional resources.

The conclusion of our report is clear: transforming Switzerland's energy system to reach net zero is technically feasible and can be achieved at a reasonable cost (possibly even with cost savings according to some ...

Switzerland's energy balance provides information on domestic production, import / export, storage, conversion, own consumption, transport and grid losses and consumption of the various energy carriers in Switzerland on an annual basis. The production of electricity and district heating and the associated energy carrier input are presented by ...
