How much solar power will the Netherlands have by 2035?

Market research firm GlobalData projects Dutch solar PV capacity could rise to 55,000 MW(55 GW) by 2035.

Longer-term projections from the Netherlands Organisation for Applied Scientific Research estimate national PV capacity could reach 180 GW by 2050.

How much electricity does the Netherlands generate from solar farms?

Last year, the Netherlands generated 14 per cent of its electricity from solar farms - up from 1 per cent in 2015 - overtaking coal-fired power generation for the first time. The proportion of electricity from solar was the highest generated in the EU, said Ember Climate, a consultancy group.

Can the Netherlands be a leader in the European solar industry?

By taking concrete action now, the Netherlands can be at the forefront of the European solar industry, which will provide a crucial economic and strategic advantage on the long term. The province of Noord-Brabant is bringing back large-scale solar industry to the Netherlands. Goal: a 2 GW factory by 2027-2028 with new solar technologies.

What does a consortium of Dutch solar companies do?

A large consortium of Dutch solar companies aims a leading position in the solar industry in Europe. The companies joint forces in SolarNL. The aim is to build several plants in a few years, building on ambitious innovation programmes. In doing so, the companies are working closely with research organisations.

What makes a European solar industry unique?

The European Solar industry must distinguish itself by its innovative products: high conversion efficiency and products for large-scale integration of solar technology that do not exist today. The programme links directly to European initiatives such as RePowerEU that aim to strengthen Europe's energy autonomy.
