Where is upenergy based?

Almost 90% of the UpEnergy Team is based on the ground across 8 African markets. Additionally, we have projects under development in Latin America and Asia. UpEnergy is proud to announce Tanzania's first-ever Article 6 authorization for carbon credits, a landmark moment in international climate finance.

What are upenergy projects?

UpEnergy projects also support those most vulnerable within agricultural supply chains through targeted carbon removal projects, such as Biochar and Agroforestry, designed not only to mitigate climate change but also deliver value back to communities at risk.

Why should you choose upenergy?

This ensures we deliver projects with high integrity, measurable impact, and significant social benefit. UpEnergy fights energy poverty by delivering clean, life-improving technologies such as electric cooking, safe water systems, and emission-reducing charcoal stoves in local communities across Africa and beyond.

UpEnergy Group, a social enterprise making cleaner technology more accessible for people and communities in low-income countries, today announced a partnership with Zurich-based foundation myclimate. An investment from the foundation will help establish a distribution network for cleaner technology to decarbonize household energy use in Malawi.

Machine type: Pyrolysis. The most important distinction between biochar projects is the level of technological sophistication. While earth kilns and kon-tiki's are cheaper and can be used by farmers themselves, their emissions can't be accurately monitored and the resulting biochar is usually of much lower quality.

Biomass dependence perpetuates a vicious cycle of energy poverty. Significant income spent on cooking fuel means less for education, healthcare, and other needs, trapping families in a cycle difficult to escape without targeted interventions. ... Residential solid fuel burning accounts for up to 58% of global black carbon emissions - which is ...

Each chimney will last up to 10 years to ensure longevity and reliability. Expense saved can be reinvested back into the school. 90% less smoke & soot thanks to ventilation. Greater thermal efficiency improves cooking results to deliver more ...

The project's portfolio of seven energy-saving projects across eastern and southern Africa has already begun, with the goal of delivering a total of 3.5 million fuel-efficient, cleaner cookstoves and water purification systems to communities across five countries.
