

How many oil terminals are there in Venezuela?

Vital for the Venezuelan oil industry, the port consists of two oil terminals located outside the main harbour. The Lagoven Oil Terminal and Puerto Borburata can accommodate ships with an LOA of 198 metres and a draught of 10.5 m. The port is divided into four operational areas covering 184 hectares of land area.

What is PCM & how does it work?

PCM is engineered material that can effectively store and release energy, and undergo a change in phase (for instance, solid-solid, solid-liquid, liquid-gas or solid-gas) as it is warmed or cooled.

What is a good PCM?

Proven PCMs include hydrated salts, paraffins, fatty acids, alcohols and more. Each material has its own performance profile, so the most appropriate PCM can be closely matched to the specific temperature requirements of each shipment.

What is VIP & PCM?

The combination of high-performance VIP and PCM panels that provide more precise temperature management inside the cargo container for hours or days, ensures safe and reliable transportation across the globe. This configuration can provide extended hold times of up to 240 hours.
