

What energy sources are available in Myanmar?

Myanmar is endowed with rich natural resources for producing commercial energy. Currently, the available energy sources in Myanmar are crude oil, natural gas, hydropower, biomass, and coal. Wind energy, solar, geothermal, bioethanol, biodiesel, and biogas are other potential energy sources.

Will hydropower generation increase in Myanmar?

Hydropower generation will increase but at a slower average annual rate of 3.4% over the same period. Myanmar's primary energy intensity (TPES/GDP) has been declining since 1990. In 2017, the primary energy intensity was 253.1 tonnes of oil equivalent per million dollars (toe/\$million), lower than 1990 when it was 1,333 toe/\$million.

Who is Yeo Teknoloji Enerji ve Endüstri?

YEO Teknoloji Enerji ve Endüstri A. Ş. | We Think It's Possible! It started its operations to provide one-stop research and development, design and engineering, procurement and production, operation and maintenance services in energy storage systems.

What is Myanmar doing about energy efficiency & conservation?

To this end, Myanmar has implemented a range of energy efficiency and conservation goals and action plans targeting energy savings in all sectors of the economy and in cooperation with both the private and public sectors.

What is Myanmar's energy policy?

Use of new and renewable energy sources is encouraged, especially solar and wind, which are abundant in Myanmar. The policy also accepts that people will still need to use traditional energy sources such as wood and charcoal. Regulations and anticipatory actions are necessary to sustain the harvesting of these primary energy sources.

What is the energy saving potential of Myanmar?

According to the 2015 Asian Development Bank report 'National Energy Efficiency and Conservation Policy, Strategy and Roadmap of Myanmar', electricity consumption in all sectors and achievable energy saving potential should reach 12% by 2020, 16% by 2025, and 20% by 2030.
